

## WHO WE ARE

Sonrisa was founded by independent Hungarian IT professionals ten years ago. We are still what we are: a diverse community of smart and passionate individuals. Our mission is to make a positive impact on the world by delivering real business value to our customers. We are dedicated to the art of software delivery by keeping it lightweight and agile and utilizing the full power of open source and state of the art technologies. We are proud that we consistently deliver scalable and reliable systems. We implement game changing applications for clients all around the Globe reaching millions of users all together.

## LOOKING FOR GREAT TALENTS

### WHO YOU ARE

As a QA Engineer, you'll be working on mission critical and complex custom-designed, business applications that use a wide range of the latest technologies. We are looking for talented, forward looking individuals with varying levels of work experience with an aptitude for learning new domains and testing methodologies. You will be working with different customers across various domains as part of the Sonrisa team to help deliver bespoke software solutions.

### AS A QA ENGINEER

### YOUR EXPERIENCE

- ▶ Minimum 2-3 years of relevant professional experience.
- ▶ Knowledge of testing web and mobile applications.
- ▶ Knowledge in triaging failures, identifying root-cause.
- ▶ Experience in impact analys.
- ▶ Hands-on knowledge in testing web, API and mobile fundamentals.
- ▶ Experience in automation testing using BDD (e.g. Cucumber) – Specflow, or Rest Assured.
- ▶ Working with testing tools like Selenium, Robot Framework, use scripting to create automated tests.
- ▶ Experience in practices like pair programming, Test Driven Development (TDD), behavior-driven development (BDD), Continuous Integration (CI), Continuous Delivery (CD).
- ▶ Using issue management (e.g. JIRA, Redmine) or bug reporting systems.
- ▶ Knowledge of programming in Java and/or C# is a plus.
- ▶ Using test environment is a plus.

### YOUR CONTRIBUTION TO SONRISA

- ▶ Have a passion for technology and software quality.

- Demonstrate strategic thinking and creativity when developing tests.
- Understand of full software development life cycle development right from the requirements gathering to delivery.
- Understand the importance of test automation and have the ability to spot points of value in the process.
- Be a hands-on tester who is comfortable across a whole range of functional and cross-functional testing.
- Good sense for understanding business problems and finding potential error cases.
- Work in an agile development team to build enterprise and high-scale applications.
- Work on international projects.
- Be a useful member in our development teams.
- Think through hard problems and work with brilliant people to make client ideas a reality
